KINETICO

Leading the world in
water solutions.

Commercial / Industrial

PowerLine™ Filtration Systems

Since 1970, Kinetico has been engineering and manufacturing water improvement products that are innovative, user friendly and responsive to customers' needs. Kinetico meets the demand for a diverse mix of applications: residential, commercial, industrial and municipal. Our advanced technology and commitment to you continue to be the basis for our rapid global growth in nearly 100 countries.

Kinetico
understands your
company's water
treatment needs.
We deliver the
quality you expect
with a variety
of standard
features and
a selection of
options for
your specific
application.

PowerLine Filter FEATURES

- ✓ High Quality Filtered Water
- ✓ High Volume Water Production
- ✓ Modularly Expandable
- ✓ Simple Operation
- ✓ Industrial Design

KINETICO'S EXCLUSIVE MACROLITE® M E D I A

When fine prefiltration is critical, this innovative media is used to remove particles as small as three microns. It normally requires no conventional pretreatment such as coagulation or flocculation to remove particles of this size. Other media are available for different applications.

Standard

Various Product Sizes provide from 50 to 250 gallons (190 to 950 liters) per unit, per minute. Higher flow rates are achieved with multiple tank configurations.

Adjustable Backwash Times accommodate changing inlet water characteristics.

Corrosion Resistant Tanks withstand the harshest environments.

NEMA 3R Electrical Enclosure protects the system's electrical components from external elements.

High Quality Filter Media is customized to solve your water's odor, iron and turbidity problems.

High Efficiency Distribution System minimizes pressure loss through system and maximizes filter bed usage.

Lead-Free Brass Control Valve puts all operation and regeneration controls in a top mount valve. This configuration simplifies installation and system operation.

Options

DIFFERENT MEDIA FOR SPECIFIC APPLICATIONS

Carbon Filtration removes chlorine to improve product water quality.

Macrolite® Media filters fine particles better than traditional media and flushes clean at lower backwash rates. Provides better filtering results and saves water.

Multimedia accommodates a variety of filtration needs by using multiple types of media within one system.

Greensand oxidizes and filters iron, manganese and hydrogen sulfide from water supplies.

ASTM Coded Pressure Vessel accommodates industrial requirements.

Various Power Configurations accommodate international installations and include 24VAC, 120VAC, 220VAC in 50/60Hz operation.

Accessories

Water Conditioner removes hardness minerals from water to prevent scaling of pipes and water-using equipment.

Reverse Osmosis improves product water quality by reducing dissolved solids from water.
